

## TRAINING OPPORTUNITIES

Not required, just good business. Most training is done at or near our Orlando office. Let the family visit the amusement parks while you learn some skills to pay for the vacation.

**Modular Clinics** are held at company offices to demonstrate the recommended techniques for installing Modular Product. Tips on how to install on a radius, coloring, mortar, tools, and business tips about marketing and pricing are all discussed.

See our entire product line and meet the RicoRock team.

Two or three day on site **Structural Seminars** teach the basics of custom rock construction: how to attach and brace castings, concrete backfill, joint textures and coloring. Previous experience with steel reinforced concrete and a deposit towards a future purchase is required. Usually held in the winter months.

**Tech Support** guys are Caleb Geffre and Juan Garcia. Both have years of experience with all aspects of cast rock construction. They have travelled nationally and internationally to work on jobsites, mostly for custom projects but sometimes for creative Modular applications. Contact us for availability and costs. If you sell it, we will help you build it.
