

# Texas Two Step

**RicoRock** INC.  
better waterfalls, by design

A compact version of this waterfall is created by not using back boulders 3 & 4 so the waterfall is 36 inches deep.

Kit weighs 1,200 lbs, heaviest piece about 200 lbs.

8 Cast pieces & natural cobbles colored (Fieldstone shown here.) 2 inch pvc plumbing snorkel included in kit, not shown here. Touch-up kit with stains included with kit.

9 feet wide, 5 ft deep, 26 in. high

The base pieces have a 3 inch lip, great for remodels or vinyl liner pools.

Install base pieces with 1-2 inch mortar and other rocks with one inch mortar. Fill joints to eliminate seepage. After mortar has set rake joints 1/2 inch. Natural cobbles can be set with construction adhesive for a cleaner look.

2 inch pvc comes from bottom of ledger #7 and connection to pool return goes between two back boulders. Pipe can be hidden with natural cobbles or diverter rocks sent as part of kit.
